## **DETAILED ACTION**

### ***Election/Restrictions***

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-28, drawn to an electric machine having a single sensor, classified in class 318, subclass 254.
- II. Claims 29-41 and 51, drawn to motor with other elements (rotor, stator, bearing, fastener, circuit board, etc), classified in class 310, subclass 66.
- III. Claims 42-46, drawn to core structure, classified in class 310, subclass 154.35.
- IV. Claims 47-50, drawn to encapsulation, classified in class 310, subclass 340.

The inventions are distinct, each from the other because of the following reasons:

Inventions single sensor motor, motor with other elements, core structure and encapsulation are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because a motor can have more than one sensor, a motor with other elements may not necessary have any sensor (such as an induction motor), a motor may have several different type of core (such as shaded pole motor vs induction

motor), and a motor may not need any encapsulation. The subcombination has separate utility such as an encapsulation can be used with a winding, a fastener may be used with a bundle of wires, a bearing may be used with a vehicle, a circuit board may be used with a TV set, etc.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

Because these inventions are distinct for the reasons given above and the search required for each group is not required for the remaining other groups, restriction for examination purposes as indicated is proper.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art because of their recognized divergent subject matter, restriction for examination purposes as indicated is proper.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
